

New Generation Computing; Supply Chain Traceability Product

Due to forced labor allegations in the Xinjiang Uyghur Autonomous Region of China, recent legislation by the U.S. Government seeks to prohibit the import of any merchandise that includes any input manufactured, wholly or in part, using forced labor.

NGC and Logility.Com launch a supply chain traceability solution, documenting 'chain-of-custody' from cotton source to importer of record!

NGC's Cloud Digital Supply Chain platform ensures that companies can track chain-of-custody throughout the supply chain by storing and managing all supporting documents related to every transaction between all supply chain trading partners at every level.

Fashion companies want clearer visibility into every level of their supply network in order to share more information with their customers, partners, and stakeholders.

The Solution creates a compliance certificate that summarizes each exchange of products and materials from fiber origin to final destination. Benefits:

- Centralize supplier information for all tiers
- Track material chain-of-custody
- Document every supply chain transaction
- Create a Compliance Certificate
- Use technology to identify supply chain risk
